

There are a wide variety of security threats that organizations face today, and no single solution can protect against all of them. A layered approach to cybersecurity can help address this by implementing multiple security measures at different layers of the network, each designed to protect against specific types of threats. Choosing Wowrack as your managed security provider keeps you protected with a multi-layered approach to stop attackers with ease. You can rest well at night knowing that Wowrack is keeping your data, assets, and people safe.

Service Features

- Network security
- Continuous environment monitoring
- End-user security
- Real-time malware protection & remediation
- Disaster recovery
- Dedicated monthly patching team
- Emergency patching team
- Data encryption

Benefits to your Organization
